SUMMARY

Software Engineer with 2.7+ years of experience in full-stack development using React, TypeScript, and NestJS/NodeJS, with hands-on expertise in building custom UI components, interactive node-based workflows with React Flow, and backend APIs

EXPERIENCE

Software Engineer

Torus Innovations

Oct 2023 – Present

Tirunelveli, Tamilnadu

- Developed full-stack application using **React**, **TypeScript** on the frontend and **NodeJS/NestJS** on the backend
- Built **node-based workflow editors using React Flow**, enabling users to visually model complex workflows with custom nodes, edges, and grouping, reducing workflow configuration time by 40%.
- Implemented complex **drag-and-drop** logic, parent-child node relationships and node based properties UI
- Designed and developed **RESTful APIs using NodeJS/NestJS**, handling workflow execution, configuration management, authentication, and data persistence.
- Built **OpenAPI**-based JSON schema mapping and nested JSON visualization/editors to support configurable, workflow-based systems and seamless frontend-backend integration.
- Develop node-based workflow components for SQL and NoSQL database schema creation using tables/collections as nodes and relationships as edges, **reducing schema design iteration cycles by 45%**.
- Built a **WYSIWYG, low-code UI builder**, allowing users to visually compose and position components using grid-based layouts, accelerating UI assembly by 30%.
- Built a **real-time node and component property editors**, enabling instant updates to layout and behavior, improving feedback loops and developer productivity.
- Built backend APIs supporting **multi-tenant architecture with versioning**, enabling tenant isolation and scalable RESTful services.
- Dockerized services and ensuring consistency environments across development, testing, and deployment.

PROJECTS

JSON Drift | *React, TypeScript, Vite, React Flow, Zustand, Monaco Editor, Tailwind CSS*

- Transforms raw JSON into an interactive node graph users can visually navigate nested structure
- Built a live-synced Monaco code editor with custom syntax highlighting and validating Json
- Designed a reactive multi-panel architecture using Zustand stores with adaptive layouts and clean separation between UI state and data logic.

Node-Based API Schema Mapper | *React, TypeScript, Vite, React Flow, Zustand, NestJS, Redis*

- Built a visual, node-based **JSON schema mapper** for designing and editing OpenAPI request and response schemas mapping and compare new and existing schemas for validating changes and safely merging incoming schema updates, Built reusable components for request and response schema mapping and visualization to accelerate future workflow development

SKILLS

Languages: Javascript , Typescript , HTML/CSS

Frameworks: React, React Flow , NextJS, TanStack Start , Vite, Redux, Zustand, AI SDK

Backend: Node.js , Express.js , Nest.js

Database: PostgreSQL , MongoDB

Authentication and Security: JWT

Developer Tools: npm/pnpm, Git, Prisma ORM, Socket.io , Claude, cursor, Docker, Redis,Turbo Repo, vsCode,Jest

EDUCATION

Francis Xavier Engineering College

Master of Computer Application; GPA: 8.00

Sadakathullah Appa College

Bachelor of Computer Science; GPA: 8.3

Tirunelveli, Tamilnadu

2021 – 2023

Tirunelveli, Tamilnadu

2018 – 2021
